

Amendments to the Claims

This listing of claims will replace all prior version, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) ~~An A wireless Internet~~ based airport information distribution system comprising: at least one airport based data center, the at least one airport based data center containing ~~Airport's Flight Information Database (FID) and Baggage Information Database (BID)~~ including a an airport information database and a server coupled to the airport information database; ~~directly coupled to the Internet a network as well as~~ coupled to the at least one airport based data center; and an information distribution system coupled to the network; the information distribution system ~~for distribution of~~ including a server system coupled to the network for receiving information from the at least one airport based data center and for providing and receiving data ~~from a to a second land based web server which formats the data for wireless Internet enabled~~ communication device concerning airport information.

2. (original) The system of claim 1 wherein the network comprises a public network.

3. (original) The system of claim 2 wherein the at least one airport data center includes a first firewall.

4. (original) The system of claim 1 wherein the server system includes;
a server coupled to the network;
a local area network (LAN) coupled to the server; and
a web server coupled to the LAN for receiving airport information from and
providing airport information to a communication device.
5. (original) The system of claim 1 wherein the airport information database and
the database are coupled via a local area network.
6. (original) The system of claim 4 wherein a first firewall is coupled between the
server and the public network and a second firewall is coupled between the web server and the
communication device.
7. (original) The system of claim 1 wherein the communication device is
wireless.
8. (original) The system of claim 7 wherein the communication device can be any
of a personal digital assistant (PDA), mobile telephone, personal computer, and laptop device.
9. (original) The system of claim 1 wherein the airport information database
comprises at least one of a flight information database (FID) and a baggage information database
(BID).

10. (original) The system of claim 1 wherein a local area network is coupled between the flight information database and the server of the at least one airport data center.
11. (original) The system of claim 1 wherein the server system includes;
a second server coupled to the network;
a local area network (LAN) coupled to the second server; and
a web server coupled to the LAN for receiving airport information from and providing airport information to a communication device.
12. (original) The system of claim 11 wherein the airport information database and the database are coupled via a local area network.
13. (original) The system of claim 12 wherein the network comprises a public network.
14. (original) The system of claim 13 wherein the at least one airport data center includes a first firewall.
15. (original) The system of claim 14 wherein a second firewall is coupled between the second server and the public network and a second firewall is coupled between the web server and the communication device.

16. (original) The system of claim 15 wherein the communication device is wireless.
17. (original) The system of claim 16 wherein the communication device can be any of a personal digital assistant (PDA), mobile telephone, personal computer, and laptop device.
18. (original) The system of claim 17 wherein the airport information database comprises at least one of a flight information database (FID) and a baggage information database (BID).
19. (original) The system of claim 18 wherein a local area network is coupled between the flight information database and the server of the at least one airport data center.
20. (original) The system of claim 1 wherein the information is in multiple languages.
21. (original) The system of claim 19 wherein the information is in multiple languages.
22. (currently amended) A method for distributing airport information comprising the steps:
- (a) providing an airport information database containing flight information (FID) and baggage information (BID) within an airport data center;

- ~~(b) airport information database is sent to a second land based database server;~~
- ~~(b) initiating a request for information from the airport information database by a wireless communication device; and~~
- (c) initiating a request for information from the ~~second land based~~ airport information database by a wireless communication device; and
- ~~(c) obtaining information related to the request by the wireless communication device.~~
- (d) obtaining information related to the request by the communication device in ~~multiple~~ languages.

23. (original) The method of claim 22 wherein the information comprises local resource information which is specific to a particular airport.

24. (original) The method of claim 23 wherein the local resource information can be any combination of data on flights, baggage location, airport butler, shop finder, transportation system, lodging, directions, local events, local attractions, promotions, feedback, choice of airport and language.

25. (original) The method of claim 24 wherein a passenger is notified/alerted by the wireless device when a plane is boarding passengers

26. (currently amended) A method for distributing airport information comprising the steps:

- (a) providing an ~~airport based~~ airport information database ~~containing flight information database (FID) and baggage information database (BID)~~ within an airport data center;
- (b) initiating a request for local resource information from ~~the a second land based~~ airport information database by a wireless communication device; and
- (c) obtaining information related to the request by the wireless communication device, wherein passengers are notified whether a flight is cancelled, ~~or~~ delayed, ~~or boarding time~~, wherein the notification is provided via a short message system (SMS).

27. (currently amended) A method for distributing airport information comprising the steps:

- (a) providing an airport information database ~~containing flight information database (FID) and baggage information database (BID)~~ within an airport data center;
- (b) initiating a request for local resource information from ~~the a second land based~~ airport information database by a wireless communication device; and
- (c) obtaining information related to the request by the wireless communication device, wherein a passenger can obtain information about different ~~flights merchants~~ intermingled with advertising, wherein a loyalty program for the passenger is utilized between merchants.

28. (currently amended) A method for distributing airport information comprising the steps:

- (a) providing an airport information database ~~containing flight information database (FID) and baggage information database (BID)~~ within an airport ~~based~~ data center;
- (b) initiating a request for local resource information from ~~the a second land based~~ airport

information database by a wireless communication device; and

(c) obtaining information related to the request by the wireless communication device, wherein local transportation information is obtained by the passenger, wherein the modes of transportation are provided, as well as associated advertising;

29. (new) The method of claim 28 which includes the steps of obtaining information related to the request by the wireless communication device, wherein consumer related information is obtained by the passenger, as well as associated advertising

30. (new) The method of claim 28 wherein merchants are contacted by a single phone button press.

31. (new) The method of claim 28 wherein passengers are contacted by broadcast alerts and notifications
